

CHARLES GOODSIR

Auckland, NZ • goodsircs@gmail.com • +64 278144772 • [LinkedIn](#) • [GitHub](#) • [Portfolio](#) • [Detour App](#)

PROFESSIONAL SUMMARY

Software application engineer with 4+ years building enterprise CRM/ERP systems in C#/.NET, moving into DevOps / DevSecOps, with application security as a specialty within that. CompTIA Security+ (SY0-701) certified. Working through the PortSwigger Web Security Academy in Burp Suite (SQL injection complete including blind SQLi, XSS in progress), and built a multi-stage GitHub Actions security pipeline (SAST, secrets scanning, SCA, container scanning, DAST, staged deployment gate) around a deliberately vulnerable ASP.NET Core / React app to practise finding and fixing real bugs end to end.

Background spans .NET/C#,

TypeScript, React Native, and Azure, with hands-on experience in secure application design, authentication and row-level access controls, CI/CD pipelines, and standardised testing frameworks that reduced configuration defect rates ~30% across NZ and AU council clients. Independently designed, built, and shipped Detour, a cross-platform mobile app live on the App Store, owning authentication and data-access security end to end. Earlier service desk experience at MBIE covered identity, access, and incident triage at 200+ tickets per month. Open to roles across Australia (Melbourne, Sydney, Brisbane), the UK, and New Zealand.

EXPERIENCE

Software Application Engineer, Finance Domain | Datacom Solutions

Auckland, NZ | Sep 2021 - Present

- Architected and delivered CRM/ERP solutions for NZ & AU local council clients, reducing configuration defect rates by ~30% through standardised testing frameworks.
- Contributed to a week-long bug smash that brought down roughly 500 defects across the product.
- Participated in new ways of working to improve planning for future go-lives.
- Ran planning sessions and live demos with customers for new work on an enterprise finance module across 3 councils.
- Mentored junior engineers on testing practices and configuration standards, accelerating time-to-independent delivery.
- Worked with C# and YAML in an Azure DevOps environment, including YAML-driven test-data generation that provisions cross-referenced data across local and cloud environments at build time.

Service Desk Analyst | Datacom Solutions (MBIE)

Wellington, NZ | Sep 2020 - Sep 2021

- Resolved 200+ IT incidents per month across phone, email, and remote sessions for the Ministry of Business, Innovation and Employment, maintaining first-call resolution above 80%.
- Reduced repeat support volume by 25% by identifying recurring issue patterns and authoring knowledge-base articles adopted across the wider team.
- Triageed and coordinated escalation of critical infrastructure incidents involving network access, identity management, and remote desktop services.

PROJECTS

appsec-homelab | github.com/charles-goodsir/appsec-homelab | 2026 - Present

- Built a deliberately vulnerable ASP.NET Core 8 / React app with seeded SQL injection and reflected XSS as a target for hands-on testing.
 - Set up a GitHub Actions security pipeline running Semgrep (SAST) and gitleaks (secrets scanning).
 - Traced a Semgrep false negative to its root cause: the rule does not treat [FromBody]-bound objects as a tainted source, so a structurally identical injection went unflagged.
 - Next: OWASP ZAP (DAST) against the running app on a dedicated Linux box, plus dependency and container scanning.
- ASP.NET Core 8, React, GitHub Actions, Semgrep, gitleaks

PortSwigger Web Security Academy | Burp Suite Community | 2026 - Present

- SQL injection: full path complete, including blind SQLi. Wrote Python solver scripts for the time-based and boolean labs, handling Oracle vs PostgreSQL syntax and cookie-appended injection.
- Cross-site scripting: working through the topic at practitioner level (reflected, stored, DOM-based).
- Next: authentication (including JWT), access control / IDOR, CSRF, SSRF.

Burp Suite, Python

Detour - Cross-Platform Mobile App (Solo Developer) | Live on App Store | 2024 - Present

- Architected a production-grade full-stack mobile app handling auth, geolocation, real-time data, and social features.
- Implemented Supabase Auth with row-level security policies to enforce data access controls, restricting user data exposure to authenticated owners only.
- Achieved sub-200ms geolocation query performance by optimising PostGIS spatial indexes on a self-managed Postgres instance.
- Deployed to production via CI/CD pipeline (Expo EAS), enabling over-the-air updates.
- Sole owner of the full SDLC from architecture and security design through to App Store submission and approval.

React Native, TypeScript, Supabase, Firestore, PostGIS

Python Automation & Scripting | Personal Projects | Ongoing

- Built web scrapers and data-gathering bots, working with HTTP, REST APIs, and data parsing.

Python

EDUCATION & CERTIFICATIONS

CompTIA Security+ (SY0-701) | CompTIA | 2026

Level 6 Diploma in Applied Software Development | Dev Academy Aotearoa | 2024

BA in History, International Relations & Political Science | Victoria University of Wellington | 2020

SKILLS

Languages: C#/.NET, TypeScript, JavaScript, Python, SQL, YAML, HTML/CSS

Security: Burp Suite, Semgrep (SAST), gitleaks, OWASP Top 10, Gherkin/BDD, threat-oriented UAT

Cloud & Infra: Azure, Azure DevOps, Supabase (Postgres + PostGIS), Firestore, CI/CD (Expo EAS, GitHub Actions), Git

Frameworks: React Native, React, Node.js, ASP.NET Core

Tools: Confluence, Jira, Miro

Practices: Agile/Scrum, secure application design, threat-oriented UAT, incident triage, technical documentation, mentorship
