Experience

DATAKOM SOLUTIONS (NZ) Software Configuration Engineer

Auckland, New Zealand
September 2021 – Current

- **Designed, coded/configured, tested, and delivered** applications across multiple regions within NZ & Australia.
- **Conducted automation testing** using Gherkin scripts to validate end-to-end business processes, guaranteeing thorough quality assurance and smooth functionality throughout the entire workflow.
- **Collaborated** with cross functional domain teams to configure solutions aligning with business requirements, ensuring adherence to standardised processes for consistent outcomes.
- Worked closely with BAs, developers, configurators, product managers, and clients to deliver features in a **large enterprise environment**.
- **Automated workflows** using in-house power tools for local government councils.
- **Built strong rapport** with my customers and developed relationships local government councils by:
 - Leading weekly CRM/ERP overview and training sessions.
 - Demoing new features in external sprint reviews.
- **Optimised and remodelled** configuration to improve system performance by:
 - Identifying issues with existing configuration and implementing effective solutions. For instance, redesigned a workflow to reduce runtime/system load from 2.5 minutes to 20 seconds.
- **Developed technical documentation** through Confluence articles to support internal releases.
- **Provided training** for associate analysts and offered continuous advice, guidance, and mentorship on duties and best practices.

DATAKOM SOLUTIONS (NZ) Service Desk Analyst

Wellington, New Zealand
September 2020 – September 2021

- **Provided first-level support** for the Ministry of Business, Innovation and Employment - documenting each call verifying customer information and including all troubleshooting steps.
- **Researched, resolved, and responded** to questions received via -telephone calls, emails, and call-backs in a timely manner, escalating problems to appropriate individuals.
- **Assisted in the resolution** of user and support issues among company sites to ensure timely distribution of knowledge and positive impact on user satisfaction.
- Do not use personal pronouns; each line should be a phrase rather than a full sentence.

Projects

Mobile App Develop, Architecture, Cloud

Auckland, New Zealand
Current

- **Developed a React Native iOS and Android app using Expo Router coded in Typescript** to help users discover points of interest through integrated maps, with features for navigation and social interaction.
- **Designed the architecture and integrated Supabase** as the backend database to store user posts, geolocation data, and bi-directional friendship relationships.
- **Optimized image loading** with Supabase Storage and FastImage, enhancing performance with advanced caching mechanisms for a seamless user experience.
- **Implemented geolocation-based features** to filter and display posts and attractions dynamically based on user location and preferences.
- **Designed a scalable Firestore data model** to support user-generated content, social interactions, and real-time updates.
- **Integrated Supabase Authentication** to enable secure user authentication and provide cross-device access to personalized content.
- **Deployed the app to iOS** platforms using Expo Application Services (EAS), ensuring smooth over-the-air updates, streamlined CI/CD workflows, and production-ready release process.
