PROFESSIONAL SUMMARY

Software application engineer with 4+ years building enterprise CRM/ERP systems, moving into application security. CompTIA Security+ (SY0-701) certified. Working through the PortSwigger Web Security Academy in Burp Suite (SQL injection complete, XSS in progress), and I run a deliberately vulnerable ASP.NET Core / React app with a CI security pipeline to practise finding and fixing real bugs. Background in C#.NET, TypeScript, and React, plus a live iOS app I built and shipped on my own.

EXPERIENCE

Software Application Engineer - Finance Domain | Datacom Solutions

Auckland, NZ | Sep 2021 - Present

- Built and delivered CRM/ERP solutions for NZ and AU local council clients. Introduced a standardised testing framework that cut configuration defect rates by roughly 30%.
- Wrote Gherkin-based workflow automation that took one critical workflow from 2.5 minutes to 20 seconds and removed a recurring class of production defect.
- Led training sessions and sprint demos to roll out a new enterprise finance module across 3 councils, all live on schedule.
- Mentored junior engineers to the point of independent delivery.

Service Desk Analyst | Datacom Solutions (MBIE)

Wellington, NZ | Sep 2020 - Sep 2021

- Resolved 200+ IT incidents a month by phone, email, and remote session for the Ministry of Business, Innovation and Employment, holding first-call resolution above 80%.
- Cut repeat support call volume by 25% by spotting recurring issue patterns and writing knowledge-base articles the wider service desk adopted.
- Triaged and escalated critical infrastructure incidents across network access, identity management, and remote desktop services.

APPLICATION SECURITY (SELF-DIRECTED)

PortSwigger Web Security Academy | Burp Suite Community | 2026 - Present

- SQL injection: full path complete, including blind SQLi. Wrote Python solver scripts for the time-based and boolean labs, handling Oracle vs PostgreSQL syntax and cookie-appended injection.
- Cross-site scripting: working through the topic (practitioner level), reflected, stored, and DOM-based.
- Next: authentication (including JWT), access control / IDOR, CSRF, SSRF.

appsec-homelab | github.com/charles-goodsir/appsec-homelab | 2026 - Present

- Built a deliberately vulnerable ASP.NET Core 8 / React app with seeded SQL injection and reflected XSS as a target for hands-on testing.
- Set up a GitHub Actions security pipeline running Semgrep (SAST) and gitleaks (secrets scanning).
- Traced a Semgrep false negative to its root cause: the rule does not treat [FromBody]-bound objects as a tainted source, so a structurally identical injection went unflagged. Documented it as a known gap.
- Next: OWASP ZAP (DAST) against the running app on a dedicated Linux box, plus dependency and container scanning.
- Writing each piece of this up as I go, with screenshots and notes, in the CyberDiary on my portfolio.

PROJECTS

Detour - Cross-Platform Mobile App (Solo Developer) | Live on App Store | 2024 - Present

- Built a full-stack mobile app from scratch with React Native, TypeScript, Supabase, and Firestore, covering auth, geolocation, real-time data, and social features.
- Set up Supabase Auth with row-level security policies so users can only read their own data.
- Tuned PostGIS spatial indexes on a self-managed Postgres instance to keep geolocation queries under 200ms.
- Set up CI/CD with Expo EAS for near-zero-effort releases and over-the-air updates without App Store re-submission.
- Took it from architecture to App Store approval on my own.

Python Automation & Scripting | Personal Projects | Ongoing

- Web scrapers and data-gathering bots in Python, working with HTTP, APIs, and data parsing.

EDUCATION & CERTIFICATIONS

CompTIA Security+ (SY0-701) | Earned Jul 2026

Threat analysis, identity and access management, cryptography, and security operations.

Level 6 Diploma in Applied Software Development | Dev Academy Aotearoa | 2023 - 2024

BA - History, International Relations & Political Science | Victoria University of Wellington | 2017 - 2020

SKILLS

Languages TypeScript, JavaScript, Python, SQL, YAML, HTML/CSS, C# (.NET, enterprise context)

Security Burp Suite, Semgrep (SAST), gitleaks, OWASP Top 10, Gherkin/BDD, threat-oriented UAT

Cloud & Infra Supabase (Postgres + PostGIS), Firestore, Azure DevOps, CI/CD (Expo EAS, GitHub Actions), Git

Frameworks React Native, React, Node.js, ASP.NET Core

Tools Confluence, Jira, Miro, Azure DevOps

Practices Agile/Scrum, technical documentation, incident triage, mentorship

Certifications CompTIA Security+ SY0-701
