PROFESSIONAL SUMMARY

Application engineer with 5+ years delivering enterprise CRM/ERP systems for NZ and AU councils, now moving into application security and DevOps. I built a gated CI/CD security pipeline around a vulnerable-by-design app, and a Terraform-managed Azure landing zone that only deploys through a scanned, approved plan. Security+ certified, PortSwigger SQLi and XSS paths complete. Targeting roles in Australia, the UK and New Zealand, or remote from Auckland.

CORE COMPETENCIES

Application Security · Secure CI/CD Pipelines · SAST / DAST / SCA · Terraform & Azure · Vulnerability Remediation · Burp Suite & OWASP Top 10 · Risk Assessment (NIST CSF 2.0)

WORK EXPERIENCE

Application Engineer, Finance Domain | Datacom Solutions

Auckland, NZ | Sep 2021 - Present

- Helped cut configuration defect rates by ~30% for NZ and AU council clients by standardising testing.
- Cleared roughly 500 defects in a week-long team bug smash.
- Ran planning sessions and live demos for a new enterprise finance module across 3 councils, and mentored junior engineers on testing and configuration standards.
- Built local council environments with .NET tooling and exported their configuration as JSON for the pipeline that builds each council's cloud environment.
- Authored YAML-driven test-data configuration in Azure DevOps, layered on an existing C# codebase, to provision cross-referenced data for local and cloud environments at build time.

Service Desk Analyst | Datacom Solutions (MBIE)

Wellington, NZ | Sep 2020 - Sep 2021

- Resolved 200+ IT incidents a month for the Ministry of Business, Innovation and Employment, with first-call resolution above 80%.
- Cut repeat support volume by 25% by spotting recurring issues and writing knowledge-base articles the wider team adopted.
- Triaged critical incidents across network access, identity management and remote desktop, and escalated them to specialist teams within SLA.

PROJECTS

appsec-homelab | github.com/charles-goodsir/appsec-homelab | Complete

- Built a vulnerable-by-design ASP.NET Core / React app with four seeded vulnerabilities (SQL injection x2, reflected XSS, plaintext passwords), then exploited, fixed and re-tested each one using parameterized queries and salted PBKDF2 hashing.
- Built a CI/CD security pipeline (secrets, SAST, SCA, container scanning) with a reviewer-approval gate, then moved it from GitHub Actions to Azure Pipelines on a self-hosted agent.
- Traced a Semgrep false negative (a missed, structurally identical injection) to a rule that ignores [FromBody]-bound input, and hardened the nginx config over three OWASP ZAP rounds, cutting warnings from 8 to 3.
- Wrote a NIST CSF 2.0-mapped risk assessment of the app.

ASP.NET Core 8, React, nginx, Docker, Azure Pipelines, Semgrep, gitleaks, Trivy, OWASP ZAP

Secure Azure Landing Zone | github.com/charles-goodsir/secure-azure-landing-zone | Complete

- Deployed a locked-down Azure environment (deny-by-default NSG, Key Vault with RBAC, private endpoints) through a 5-stage pipeline: validate, Trivy scan, plan, manual approval, apply.
- Used OIDC workload identity federation so the pipeline stores no client secret. Apply runs only the saved plan a reviewer approved.
- Fixed 5 of 6 scanner findings, including a CRITICAL Key Vault with no network ACL, and accepted the sixth (geo-redundancy on an account holding no data) with a written reason.
- Added weekly drift detection, and caught a misspelled condition that would have run Apply on every pull request.

Terraform, Azure, Azure DevOps, Trivy, OIDC

PortSwigger Web Security Academy | Burp Suite Community | In Progress

- SQL injection and XSS paths complete, including blind SQLi (with Python solver scripts), AngularJS sandbox escapes and CSP bypasses.
- Authentication in progress; JWT, access control, CSRF and SSRF next.

Burp Suite, Python

Detour: Cross-Platform Mobile App | [Live on App Store](#) | 2024 - Present

- Built and shipped a mobile app on my own, from architecture and security design to App Store approval, with Supabase Auth and row-level security policies restricting each user to their own data.

React Native, TypeScript, Supabase, PostGIS

Finance Tracker 2.0 | Personal project | Complete

- FastAPI backend on AWS Lambda behind API Gateway, deployed with AWS SAM, with DynamoDB storage and EventBridge scheduled jobs.

Python, FastAPI, AWS Lambda, API Gateway, SAM, DynamoDB, EventBridge

EDUCATION

Level 6 Diploma in Applied Software Development | Dev Academy Aotearoa | 2024

BA in History, International Relations & Political Science | Victoria University of Wellington | 2020

CERTIFICATIONS

CompTIA Security+ (SY0-701) | CompTIA | 2026

SKILLS

Languages: TypeScript, JavaScript, Python, SQL, Bash, YAML/JSON, HTML/CSS

Security: Burp Suite, Semgrep, gitleaks, Trivy, OWASP ZAP, Dependabot, OWASP Top 10, NIST CSF 2.0, CSP & security headers

Cloud & Infra: Azure, Azure DevOps, Terraform, Docker, Linux, nginx, AWS, Supabase (Postgres + PostGIS), GitHub Actions, Git

Frameworks: React, React Native, Node.js, ASP.NET Core, FastAPI

Practices: Agile/Scrum, incident triage, technical documentation, mentoring
